Negen dagen Toni Jordan 2013-06-20 Het is 1939, de wereld maakt zich op voor de Tweede Wereldoorlog. In Richmond, een volksbuurt in Melbourne, lijkt de oorlog echter ver weg en de vijftienjarige Kip Westaway, als stalknecht de kostwinner van een arm gezin, beleeft de belangrijkste dag van zijn leven. Deze dag is een van de negen dagen die levensbepalend zijn voor negen familieleden, van vier verschillende generaties, gedurende de daaropvolgende zestig jaar: Kips moeder, zijn dierbare zus Connie en Francis, zijn broer die hem altijd kleinerde. Maar ook Kips vrouw Annabel, zijn tweelingdochters, die ieder hun eigen geheim met zich meedragen en kleinzoon Alec, die zestig jaar later een oude vergeelde foto van Connie en buurjongen Jack vindt. Langzaam wordt duidelijk wat er jaren geleden is gebeurd met Connie en Jack en komt de hartverscheurende waarheid aan het licht. Negen dagen is een meeslepende roman over twee families en de ontroerende liefdesgeschiedenis die hen samenbrengt. Een roman over dromen, opoffering en liefde, waarin Toni Jordan spitsvondige humor combineert met compassie en levenslust.

Combined Analyses of Cancer Mortality Among Nuclear Industry Workers in Canada, the United Kingdom and the United States of America E. Cardis 1995 Reports the results of an analysis of combined mortality data on 95,673 nuclear industry workers at seven facilities in the USA, UK and Canada. Workers at these facilities, which include both atomic energy stations and nuclear weapons plants, have been monitored in previous studies to determine the health effects of external exposure to ionizing radiation. By combining and assessing data from previous studies, the present analysis aimed to develop more precise estimates of the risk of radiation-induced cancer and thus to strengthen the scientific basis for setting radiation protection standards. The study also compared risk estimates among workers with estimates obtained in high-dose studies, including investigations of atomic bomb survivors and of patients irradiated for therapeutic purposes. The results represent the most comprehensive and precise direct assessment to date of the carcinogenic risk of protracted external exposure to generally low doses of ionizing radiation. The combined analysis of data on nuclear industry workers found a significant increase in the risk of leukemia, and of myeloid leukemia in particular, at relatively low dose levels. The study also provided an opportunity to examine some of the previously reported associations between low doses of ionizing radiation and mortality from specific cancer types. Of the 36 cancer types or groupings considered, most showed little or no association with radiation exposure. Apart from leukemia, multiple myeloma was the only cancer to exhibit a statistically significant association with radiation dose.

Het feest van de Bok Mario Vargas Llosa 2017-09-09 Urania Cabral keert na vijfendertig jaar terug naar de Dominicaanse Republiek om haar zieke vader te confronteren met zijn verleden als marionet van de verschrikkelijke dictator Trujillo. Via haar monologen, en het meedogenloze verhaal van Trujillo, komen de tientallen jaren die deze potentaat zijn land terroriseerde tot leven. Het feest van de Bok is behalve een beeldend verslag van een dictatuur ook het verhaal van een vrouw die haar traumatische verleden niet achter zich kan laten en die zich, ondanks de gruwelijke herinneringen die ze met zich meedraagt, tot haar dood verbonden zal voelen met een perverse dictator. Hij zal voor altijd de man blijven die haar leven bepaalde. Op een pijnlijk subtiele maar precieze toon geeft Vargas Llosa inzicht in het menselijk onvermogen om het verleden los te laten..
